The Art Of Fire

The Future Of Fire From Innovative Backyard Designs

While IBD has been the premier supplier of outdoor room cabinetry to our dealer base since our beginning, we have also stepped into the realm of fire pits and fireplaces. To accomplish this mission we have also designed products that use Ethynol Alcohol based fuel as a fuel source in addition to natural and propane gas. The ability to have a true ecological fuel, without the need for connection to a fuel supply line transitions IBD as the leader for the fire pit and fireplace industries into the future.

*Our **ART OF FIRE** collection shows how the design experts at IBD can design and manufacture to your client's exacting standards. Only IBD can provide a true custom look in a fireplace, giving the client a truly unique appliance with design, beauty, and performance.*

*The **IBD ART Of FIRE** was awarded the **2010 VESTA Award** for the outdoor hearth product at the HPBA Expo in Orlando Florida for a truly unique design. IBD duplicated the logo of one of our network partners, Bio Flame of Alberta Canada into a fireplace for the future. Take a look at the true uniqueness of the IBD Outdoor Rooms design approach and dream of what we can design and build for you.*

Supplier to the trade of quality components and training for Outdoor Room Components
Recognized as one of the leaders in the OUTDOOR ROOM in the USA!

This shows the Teardrop design that won the VESTA Award at the 2010 HPBA show. This featured the burner by Bio Flame that was shown with the exclusive IBD burner Bio-Venturi that dramatically increased the flame without compromising fuel usage. This shows the way that an IBD Art Of Fire design can be combined with a Bio Fuel burner not only for a dramatic look but with the ability to be installed anywhere without attachment to a fuel source, and to create a non-polluting flame that meets the green standards.

A closer look at the Vesta Award Winner, The Tear Drop fireplace, finished with the IBD proprietary Granitech finish with Alabaster as the color choice, gave a true customized look and a dynamic way for a company to present their Logo and products in a manner that the buyer will remember.

Another winning design from the minds of the designers at IBD, this unit we call The Diamonds originated from a concept in the minds of our design team of a truly unique custom look in a fireplace. The Diamonds features three Bio Flue burners, but could easily be utilized with gas if the installation requirements were more for that use.

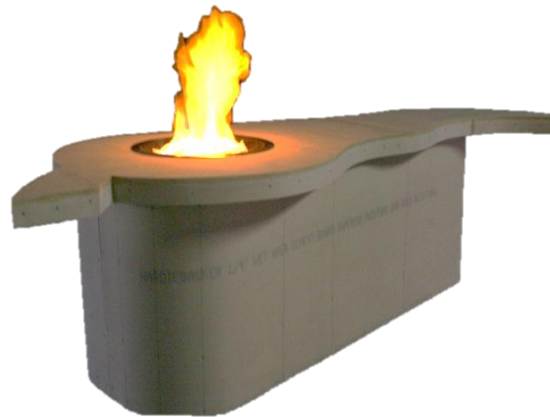

The Ovation is a unit that steps outside of the normal thinking for a fireplace. This unit was manufactured to house a Rinnia one-sided or see through unit, but can easily be utilized with a Bio Fuel or a gas fired burner system. Again IBD is a custom manufacturer and we can work with your choice of burners, fuels, and designs. IBD has as their mission, to be the leader in the Outdoor Room category in fireplaces and fire pits.

The minds at IBD can conceive the needs, and do it very well. To fill the need for a fireplace to work in the center of an outdoor area, we present The Cylinder, a fireplace that has a see-through design, can be built with the radius as the designs needs require, to give a truly different look and meet the need of the consumer for The Art of Fire.

But the minds at IBD Outdoor Rooms continue to work towards the unique, to develop and build to the individual taste of the end user. Who else but IBD can build The Hot Pepper, a unit shaped as a Chili Pepper to provide a look at that only be described as unique, only IBD can provide you with an outdoor table in any shape or size you wish. The Chili Pepper features a unit set at dining height and has a total length of 10 foot. Shown as a Ready To Finish Unit

And one idea is the fore-thought of another, presenting The Chili Pepper Coffee table. This unit set at coffee table height, with a separated ventilated compartment for the gas supply. The minds at IBD, through the ability to listen to the needs of the dealer and their valued clients can conceive, design, build, and deliver the unique needs for the buyer for today's outdoor room products

The Art Of Fire continues with the IBD Landscape Fireplace, another unique product that can utilize your choice of Bio Fuel or Gas as the fuel choice. The firebox walls of stainless steel provide an added depth while the reflection of fire and glass magnifies the flames without adding fuel use. The IBD Landscape Fireplace in your choice of fireplace and cabinet dimensions to fit the unique sizing needs of your valued client. Shown finished in 2-tone Granitech. Burn matter is blue glass, but could be used with any number of burn matter options.

The look of fire, an important part of the Outdoor Room, but today's buyer not only wants their living outdoors; they want the outdoor living area to have their own unique look and their own unique features. IBD gives you an American manufacturer that can deliver all of the needs, and do this in a short lead time.

**OUR MISSION / EXCEED THE
EXPECTATIONS OF OUR DEALERS AND
THEIR VALUED CLIENTS**

With that said, what can IBD design and build for your truly unique and valued client base, let us put our talents to work for you!
